Online System Signature System

Introduction

SEUIC Technologies Co., Ltd.

Android applications need to be signed (application signing is mainly to avoid external malicious decompression, cracking or decompilation to modify the content, the essence of the signature is authentication. every application running on the Android platform must have the developer's signature). System signature is a special kind of signature, it is different from the ordinary application developer signature, only through the system signature of the application to obtain specific system permissions and functions.

Granting system-level privileges commonly used for system signatures

- Get IMEI
- Get Wi-Fi MAC (including device MAC)
- Get Bluetooth MAC
- Modify system database (for getting/modifying some system parameters, such as Wi-Fi, Bluetooth, getting the current system default input method, etc.)
- Privileged access to applications (e.g. system services, device manager, etc.)
- Other system-level privileges

Online system signature management system provides users with self-service system signature acquisition function. After opening account privileges, users can log into the system and upload applications for system signature by themselves during application testing and version updating, reducing the docking workload.

Application Process

Docking SEUIC pre-sales or sales to provide relevant information, after the audit will open the relevant account for you

providing information

- Customer name: XXX (necessary)
- Application package name: XXX (necessary, need to be added to the system by the administrator in order to sign, replace the package name to be provided again, app targetSDKVersion shall not be greater than 29)
- Login account: mobile phone number or letters (non-essential, do not provide the system default)
- Password: contain upper and lower case letters, numbers, special characters and at least 8 characters (non-essential, do not provide the system default)

Introduction to Use - Operational Use

After opening account privileges, access the system

Introduction to Use - Operational Use

Click on the 'APP APK' button, upload the application that needs to be signed (the name of the application package should be the same as the package name filled in the application) and confirm.

The image displays two screenshots of the Seuic Toolbox web application interface, specifically the 'APK Management' section.

Top Screenshot: Shows the 'APK List' table with columns: Index, APK name, Upload time, Uploader, Signature status, Signature time, and Operation. The table is currently empty, displaying 'No Data'. A red box highlights the 'Add APK' button in the top right corner of the table area.

Bottom Screenshot: Shows the 'Add APK Package Form' modal dialog. The modal contains the text 'APK file upload:' followed by a 'Click to upload' link. Below this, the filename 'SystemManager_medical_1.1_240923_release.apk' is displayed. At the bottom right of the modal, there are two buttons: 'Cancel' and 'Add'. The 'Add' button is highlighted with a red box.

Introduction to Use - Operational Use

After uploading, click 'APK Signature', select Signature tool - 东集签名工具, click OK to sign successfully! If the signature is abnormal, please contact SEUIC's pre-sales or sales staff.

The screenshot displays the Seuic Toolbox interface for APK Management. The left sidebar shows the 'System Signature' menu with 'APK Mgmt' selected. The main content area shows the 'APK List' table with one entry: 'SystemManager_medical_1.1_240923_release' uploaded on '2024-09-24 14:52:41' by 'subscribers'. The 'Signature status' is 'Unsigned'. The 'Operation' column has a red box around the 'APK signature' button and a 'Delete' button. A 'Signature Tool Selection' dialog is open, showing a dropdown menu with '东集签名工具' (Seuic Signature Tool) selected, highlighted by a red box. The dialog has 'Cancel' and 'Confirm' buttons.
